TRINETRA AMBUSH CAMERA - TAC

GAURAV

TAC

Introducing the Trinetra Ambush Camera [TAC] [GAURAV] Version, a fully designed and developed in India, state-of-the-art AI-powered trail camera for long-range, wireless surveillance. With advanced motion detection, it identifies human or animal presence and transmits images up to 3 kilometres without internet. Its non-glow infrared LEDs and colour night vision ensure clear images even in total darkness, making it ideal for securing border areas.

By installing these cameras at higher peaks, ground forces can monitor vast regions remotely, reducing patrol time and enabling more efficient resource allocation. This enhances situational awareness and response time, providing superior protection for critical zones.

ABOUT US

7 Darters Info Services Pvt Ltd specializes in advanced AI-powered surveillance systems and autonomous drones for defence and law enforcement. Our mission is to provide reliable and efficient security solutions that adapt to the dynamic demands of modern security operations.

With advance AI, wireless communication, and autonomous technologies, we empower security forces with real-time intelligence and robust surveillance capabilities, ensuring operational effectiveness in critical environments.
